Election/Restrictions

This application contains claims directed to the following patentably distinct species:

Species I: The invention is drawn to an ink jet print device, wherein the correction quantity determining means prestores the cycle, TO, of the pulse signal output at a certain speed V0 of the carriage and also prestores the positional correction quantity dX0 and determines the positional correction quantity dX(t) from the cycle, T(t), of the pulse signal output measured by the time measurement means in the speed sensing means as given by an equation $dX(t) = dX0 \times T0/T(t)$.

Species II: The invention is drawn to an ink jet print device, wherein the correction quantity determining means prestores a correction quantity table representing a relationship between multiple cycles of the pulse signal output and multiple positional correction quantities and determines the positional correction quantity from the cycle of the pulse signal output measured by the time measurement means in the speed sensing means in reference to the correction quantity table.

Species III: The invention is drawn to an ink jet print device, wherein the time measurement means obtains the cycle of the pulse signal output as digital data; and the position details sensing means divides the cycle of the pulse signal output time-measured by the time measurement means by shifting data of the cycle of the pulse signal output toward the right by a predetermined number of times.

Species IV: The invention is drawn to an ink jet print device, the position sensing means contains approximate position sensing means for measuring a number of pulses of the pulse signal output from the encoder to sense an approximate position of the carriage and a combined

Art Unit: 2853

value of a count by the approximate position sensing means as high order digits and a count by the position details sensing means as low order digits is the carriage position.

The species are independent or distinct because they contain claimed limitations that are different characteristics and patentable over each other.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 1 is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Art Unit: 2853

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to LAM S. NGUYEN whose telephone number is (571)272-2151. The examiner can normally be reached on 7:00AM - 3:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, STEPHEN D. MEIER can be reached on (571)272-2149. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would
